

Software developer - software engineer

Who are we?

BioLizard is a growing start-up company providing bioinformatics and software engineer solutions for our customers in biotech, pharma and academia. Typically, a lizard adjusts to its surroundings and that is exactly what we do. At BioLizard we adapt to our customers' data environment! The research field is rapidly becoming more data-driven, where we strive towards offering state-of-the-art bioinformatics, software development and machine learning solutions to help solve our customers' biological questions. Our bioinformatics scientists and software engineers are embedded in the working environment of our customers in a full-time or half-time regime, collaborating on challenging projects in life science.

As (front-end / design) developer, you will have the opportunity to work on exciting multidisciplinary projects within biotech and biopharma. You'll be working on some of the most challenging interfaces as part of an international multidisciplinary team with real career opportunities.

Do you have an excellent knowledge of front-end technologies and are you up for a challenge? Do you love working in a multidisciplinary team, using the newest technologies and are interested in the biotech, pharma and diagnostic sector? Then don't hesitate & apply now!

Keywords

Analytical mindset – Eager to learn – Independent and team player - Multidisciplinary - Solution-oriented – Positive and open-minded

Job requirements

- You hold a bachelor/master degree in Computer science (or equivalent by a proven track record.)
- You have a solid grasp of common software engineering practices, like OO principles, modern design patterns, test-driven development, version control systems, continuous integration and continuous deployment
- Good knowledge of common technologies as HTTP, REST, JSON, XML, OAuth, SQL.
- You're well-aware of common web application vulnerabilities (Injection, XSS, CSRF, ..)
- Thorough understanding of front-end architecture, both in terms of (web) application and mobile development
- Knowledge of HTML5, CSS3 (sass/less), webpack and at least one frontend web framework such as Vue.js, React, Angular.js or Flutter
- An affinity for user friendly as esthetic design of intuitive applications.
- Eager to learn, as a consult you will need to answer to needs of the client, which means learning new skills is part of the job description

- You take pride in organised, clear & concise code
- You have strong project management and reporting skills
- Knowledge or background in life-sciences is considered an advantage
- Fluent in English, with good communication skills.

Responsibilities:

- You will be responsible for the front end development of applications, and will work closely with backend developers, data engineers, data scientists and occasionally sales to aid in estimates
- You will be responsible in overseeing the design and development of our application and will need to communicate with clients to guide development
- You are eager to learn, as a consultant different clients have different desires and thus require different solutions, this can imply development of an existing application in a potentially foreign language/system.

Job offer

- A challenging and motivating work environment where like-minded people strive towards top-grade results in a continuously evolving research domain
- A personal growth trajectory focusing on self-development and knowledge expansion
- Project guidance together with senior profiles and our academic network of experts
- An attractive salary package with additional benefits.
