

## Junior project manager

### Who are we

BioLizard is a growing scale-up company providing data science and bioinformatics solutions for our customers in biotech, pharma and academia. With the research field rapidly becoming more data-driven, we offer state-of-the-art data science, bioinformatics, statistics and machine learning solutions to help solve our customers' biological questions. Typically, a lizard adjusts to its surroundings and that is exactly what we do. At BioLizard we adapt to our customers' data environment! Our Lizards are embedded in the working environment of our customers in a full-time or half-time regime, collaborating on challenging projects in life science.

As a junior project manager, you will have the opportunity to work on exciting multidisciplinary projects within biotech and biopharma spanning data science, bioinformatics, software development and machine learning disciplines. You will work closely with the business development team by helping them translate business opportunities into concrete offers and support internal pre-sales activities. You will define, set up and manage projects with our Technical Leads and Lizards and make sure they are delivered on time, with quality and within budget. You will work closely with your fellow project manager(s) and planning manager to make sure work is allocated across the organisation in a most optimal way.

### Keywords

Project management – Life sciences – Delivery mindset – Customer focus

### Job requirements

- You have at least a university degree in biotechnology, bio-engineering, computer science, software engineering or a similar field.
- You have an organisational mindset, you are self-organising and like to take the lead in delivering projects according to the customer needs
- You like helping teams grow to the next level and remove all impediments the team encounters
- You take proud in making sure your data, reports and administration is up to date
- You have a business mindset and interest in Pre Sales
- You are familiar with different project management methodologies in an agile environment, preferably in a technical environment
- You are fluent in English. You have good communication and reporting skills. You can carry on conversations with business customers, upper management, and technical personnel. If you are Dutch speaking, your Dutch writing skills are of high quality
- Willing to travel when the need arise (depending on project)
- Knowledge or background in life sciences is considered an advantage

### Job offer

- A challenging and motivating work environment where like-minded people strive towards top-grade results in a continuously evolving research domain
- A personal growth trajectory focusing on self-development and knowledge expansion
- Project guidance together with senior profiles and our academic network of experts
- An attractive salary package with additional benefits
