

IT systems engineer

Who are we?

BioLizard is a growing consultancy company providing data science solutions for our customers in biotech and pharma. Typically, a lizard adjusts to its surroundings and that is exactly what we do. At BioLizard we adapt to our customers' data environment! The research field is rapidly becoming more data-driven, where we strive towards offering state-of-the-art bioinformatics, statistics and machine learning solutions to help solve our customers' biological questions. Our bioinformaticians are embedded in the working environment of our customers in a full-time or half-time regime, collaborating on challenging projects in life science.

As an IT systems engineer, you will play a crucial role in maintaining and enhancing BioLizard's IT infrastructure that supports our diverse biotech and biopharma projects. You will be responsible for driving the internal IT roadmap, ensuring a seamless working experience for your colleagues. Your key focus will involve leading the design, development, and implementation of intricate solutions related to security, DevOps, and IT infrastructure. By doing so, you will be a driving force in enabling BioLizard to achieve its goals and deliver outstanding results.

Keywords

Cloud infrastructure – Security – Configuration management – IT policies – Solution-oriented – Positive and open-minded - Proactive
