

Software Engineer

Who are we?

BioLizard is a growing scale-up company providing bioinformatics and software engineering solutions for customers in biotech, pharma and academia. Typically, a lizard adjusts to its surroundings and that is exactly what we do. At BioLizard we adapt to our customers' data environment! The research field is rapidly becoming more data-driven. We strive towards offering state-of-the-art bioinformatics, software development and machine learning solutions to help solve our customers' biological questions.

As a software developer, you will have the opportunity to work on exciting multidisciplinary projects within biotech and biopharma. You'll be working on some of the most challenging interfaces as part of an international multidisciplinary team with real career opportunities. Do you love working in a multidisciplinary team, using the newest technologies and are interested in the biotech, pharma and diagnostic sector? Then don't hesitate & apply now!

Keywords

Analytical mindset – Eager to learn – Independent and team player - Multidisciplinary - Solution-oriented – Positive and open-minded

Job requirements

- You hold a master degree in Computer science (or equivalent by a proven track record.)
- You have a solid grasp of common software engineering practices, like OO principles, modern design patterns, test-driven development, version control systems, continuous integration and continuous deployment
- You are knowledgeable in Python/R and at least one other general purpose programming-language. Experience with web application frontend development is a plus.
- Demonstrated ability to work in a Linux environment, including experience with shell scripting and common command-line tools.
- Experience with cloud computing platforms is considered a plus
- Eager to learn, as a consult you will need to answer to needs of the client, which means learning new skills is part of the job description
- You take pride in organised, clear & concise code
- You have strong project management and reporting skills
- Knowledge or background in life-sciences is considered an advantage
- Fluent in English, with good communication skills.

Responsibilities:

- You will be responsible for the design and development of software solutions and will work closely with other developers, data engineers, data scientists and occasionally sales to aid in estimates
- You are eager to learn, as a consultant different clients have different desires and thus require different solutions, this can imply development of an existing application in a potentially foreign language/system.

Job offer

- A challenging and motivating work environment where like-minded people strive towards top-grade results in a continuously evolving research domain
- A personal growth trajectory focusing on self-development and knowledge expansion
- Project guidance together with senior profiles and our academic network of experts
- An attractive salary package with additional benefits.
